## 4.Zgjidh **Enabled** pastaj OK.

Prohibit access to properties of a LAN connection								
Prohibit access to properties of a LAN connection Previous Setting Next Setting								
<ul> <li>Not Configured</li> <li>Enabled</li> </ul>	Comment:							
Disabled	Supported on:	At least Windows 2000 Service Pack 1						
Options:		Help:						
		Determines whether users can change the properties of a LAN connection.         This setting determines whether the Properties menu item is enabled, and thus, whether the Local Area Connection Properties dialog box is available to users.         If you enable this setting (and enable the "Enable Network Connections settings for Administrators" setting), the Properties menu items are disabled for all users, and users cannot open the Local Area Connection Properties dialog box.         Important: If the "Enable Network Connections settings for Administrators" is disabled or not configured, this setting will not apply to administrators on post-Windows 2000 computers.         If you disable this setting or do not configure it, a Properties menu item appears when users right-click the icon representing a LAN connection. Also, when users select the connection, Properties is enabled on the File menu.	E
