

Samba install dhe config.

Samba eshte nje program qe mundeson printer dhe file sharing midis sistemeve Linux dhe Windows duke perdonur protokollet TCP/IP .

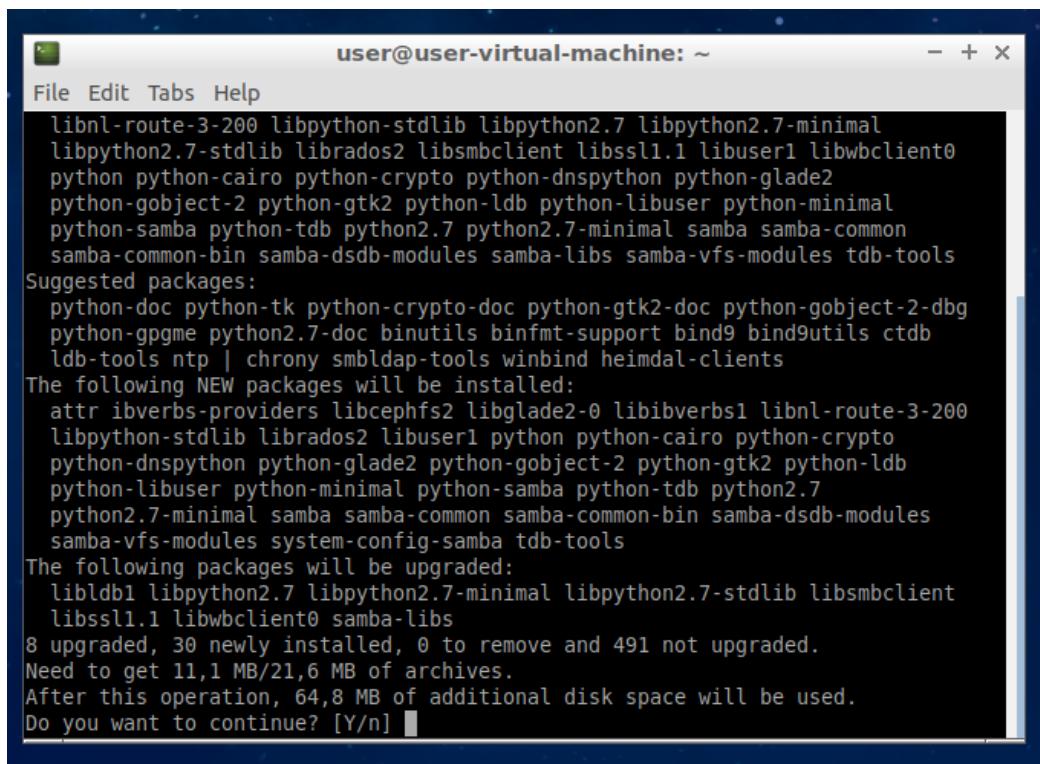

Instalohet ne Linux(Lubuntu 18.04) duke perdonur dy menyra Teminal mode dhe GUI mode.

Hapim terminalin dhe shkruajme komanden e meposhtme

```
user@user-virtual-machine: ~
File Edit Tabs Help
user@user-virtual-machine:~$ sudo apt install system-config-samba
```

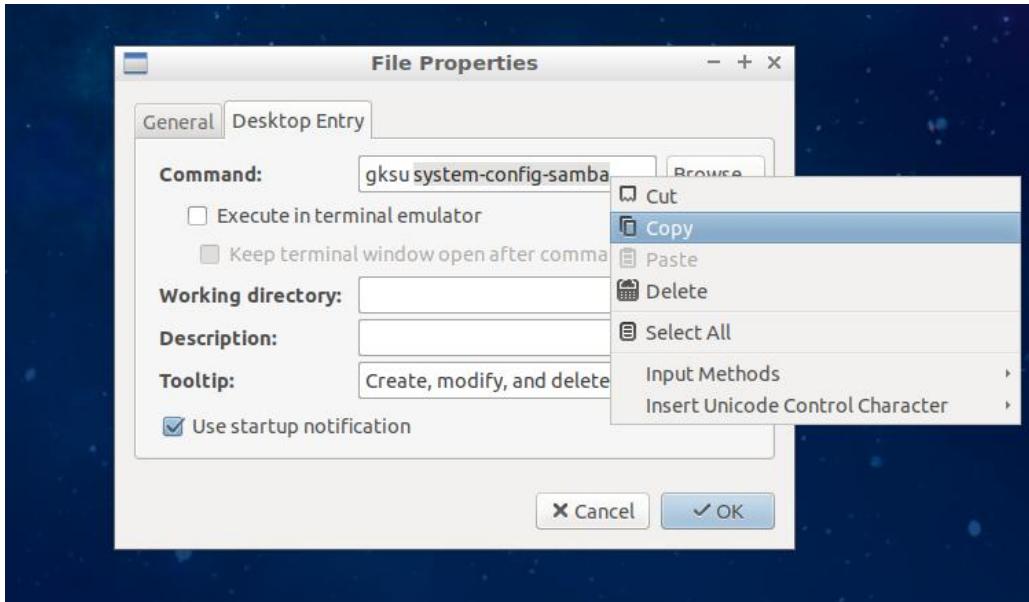

Shtypim "Y" dhe presim derisa te perfundoje instalimi.

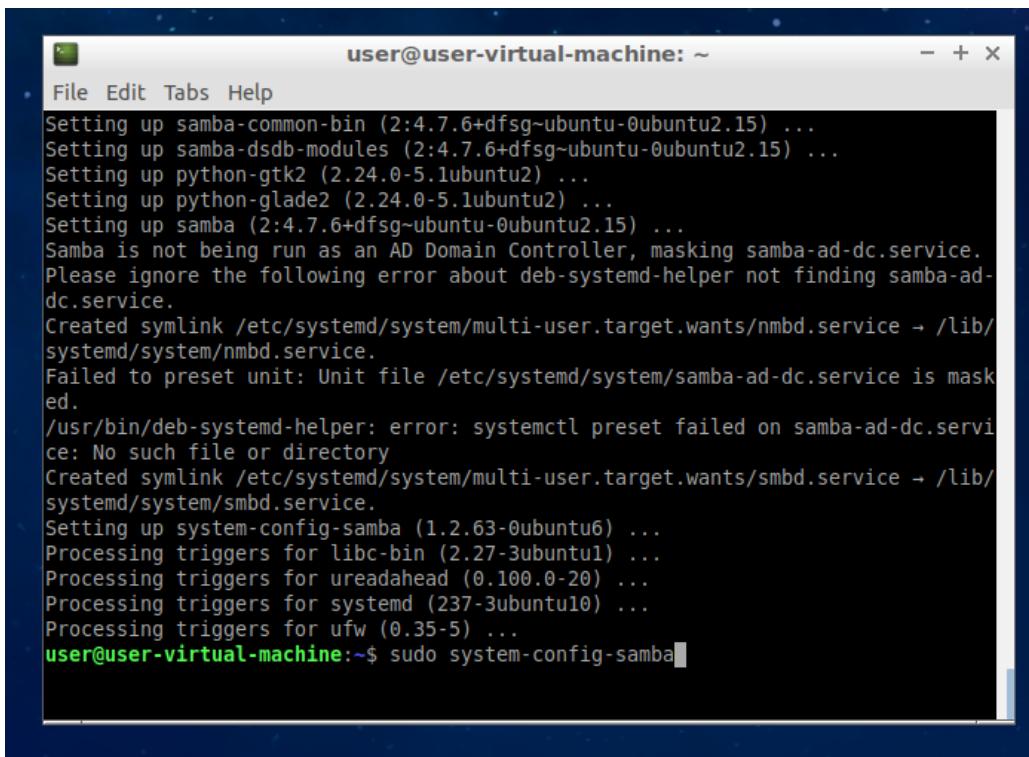

```

The screenshot shows a terminal window titled "user@user-virtual-machine: /etc/samba". The window title bar also displays "smb.conf" and "Modified". The menu bar includes "File Edit Tabs Help". The main area of the window shows the contents of the smb.conf file. The file contains several comments at the top, followed by a section titled "[global]" with the setting "client max protocol = NT1". Below this, there is a section titled "## Browsing/Identification ###". At the bottom of the file, there is a note about file name and keyboard shortcuts. A file name entry field shows "smb.conf" and a status bar at the bottom lists keyboard shortcuts: ^G Get Help, M-D DOS Format, M-A Append, M-B Backup File, ^C Cancel, M-M Mac Format, M-P Prepend, and ^T To Files.

```

The screenshot shows a terminal window titled "user@user-virtual-machine: /etc/samba". The user has run several commands: "sudo touch etc/libuser.conf", which resulted in an error message about a non-existent file; "sudo touch /etc/libuser.conf"; "cd /etc/samba"; "ls", which shows files like "gdbcommands", "smb.conf", "smb.conf.save", and "tls"; and finally "sudo nano smb.conf". The terminal prompt is "user@user-virtual-machine:/etc/samba\$".

```
user@user-virtual-machine:~$ sudo touch etc/libuser.conf
[sudo] password for user:
touch: cannot touch 'etc/libuser.conf': No such file or directory
user@user-virtual-machine:~$ sudo touch /etc/libuser.conf
user@user-virtual-machine:~$ cd /etc/samba
user@user-virtual-machine:/etc/samba$ ls
gdbcommands  smb.conf  smb.conf.save  tls
user@user-virtual-machine:/etc/samba$ sudo nano smb.conf
user@user-virtual-machine:/etc/samba$
```

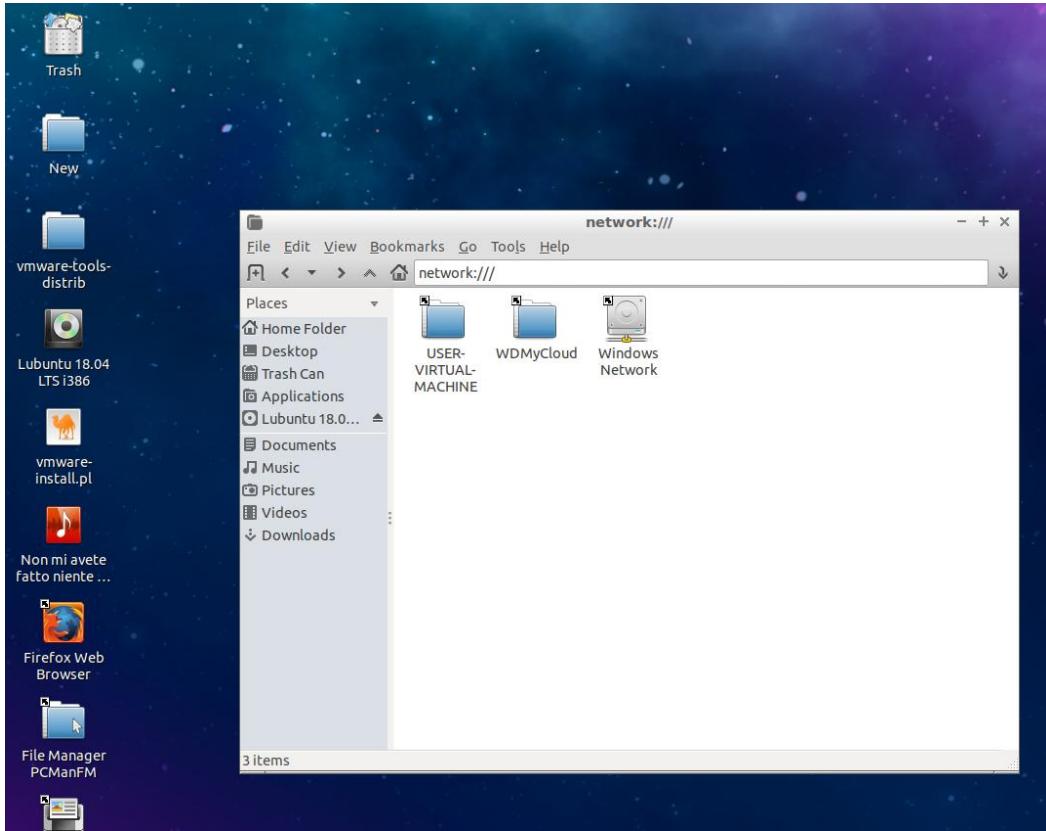

12- Restart Lubuntu

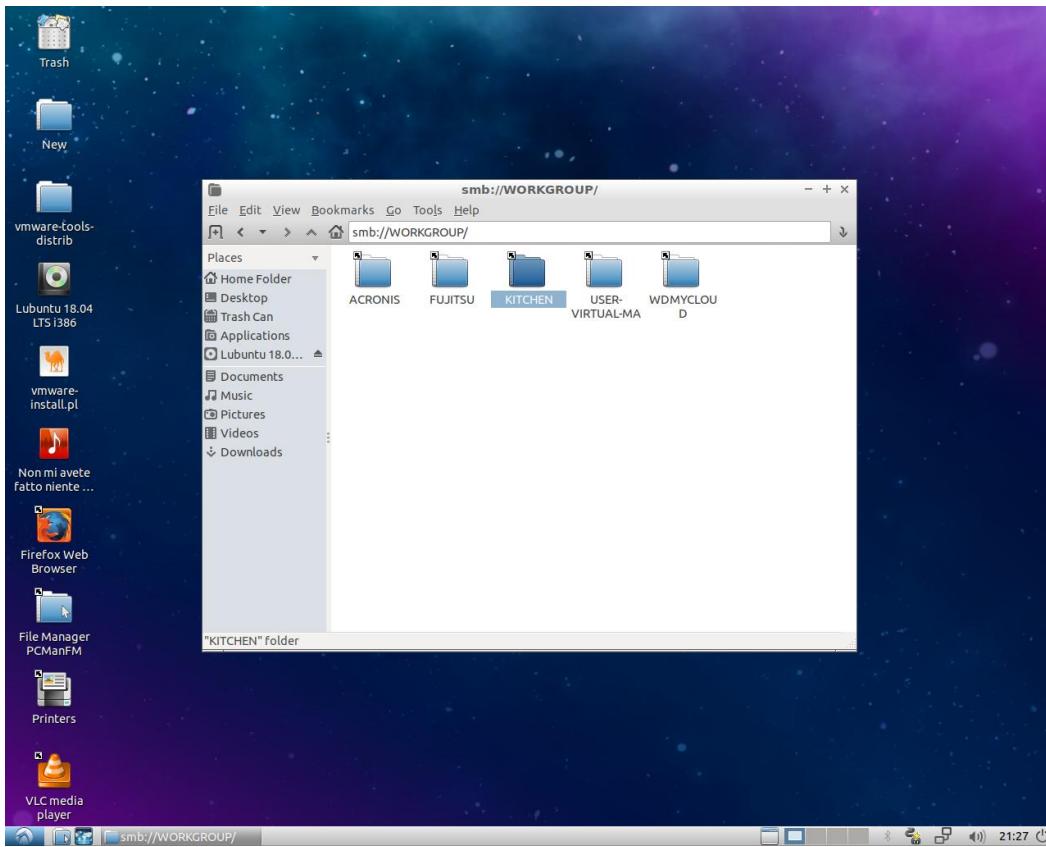

13- Kontrollojme Network-un

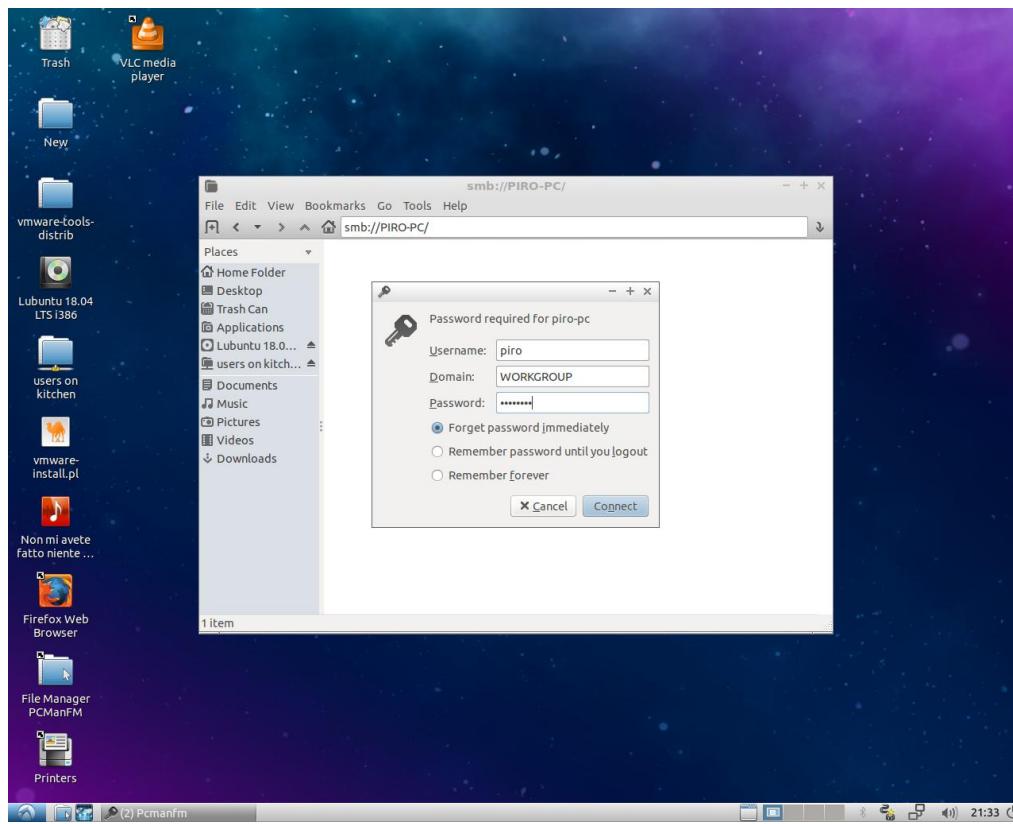

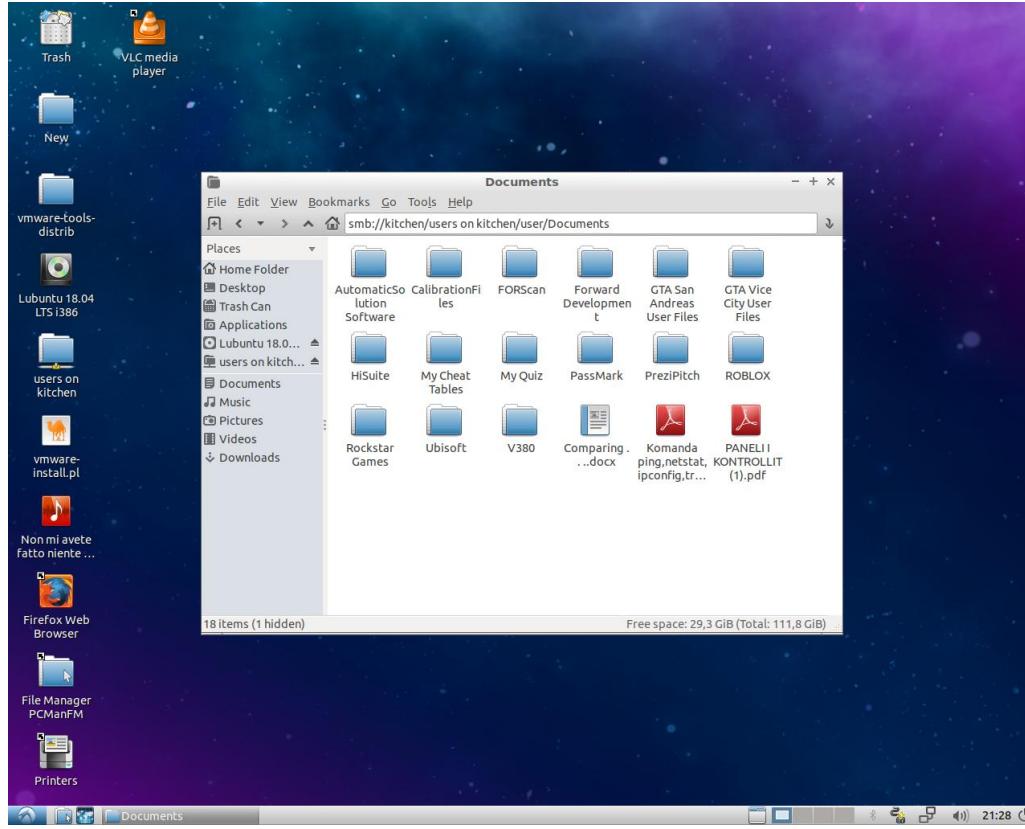

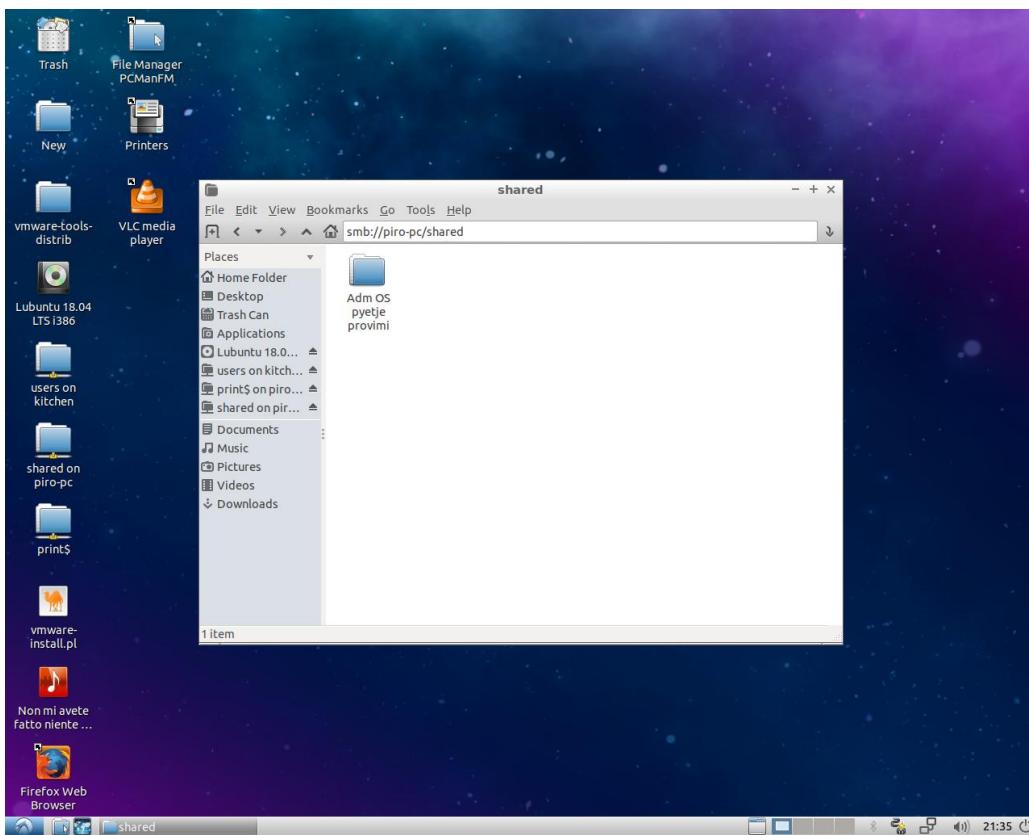

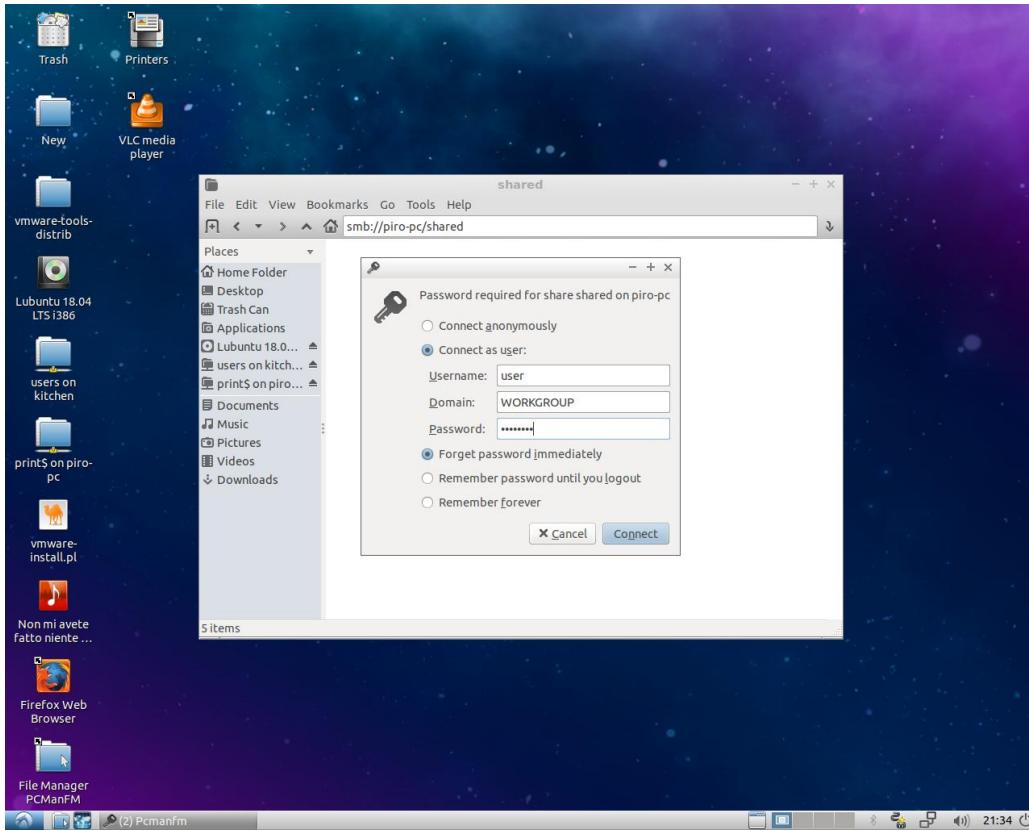

14- Aksesojme Windows network

15- Aksesojme nje nga kompjuterat e lidhur ne rrjet(kitchen) si dhe shared folders dhe files

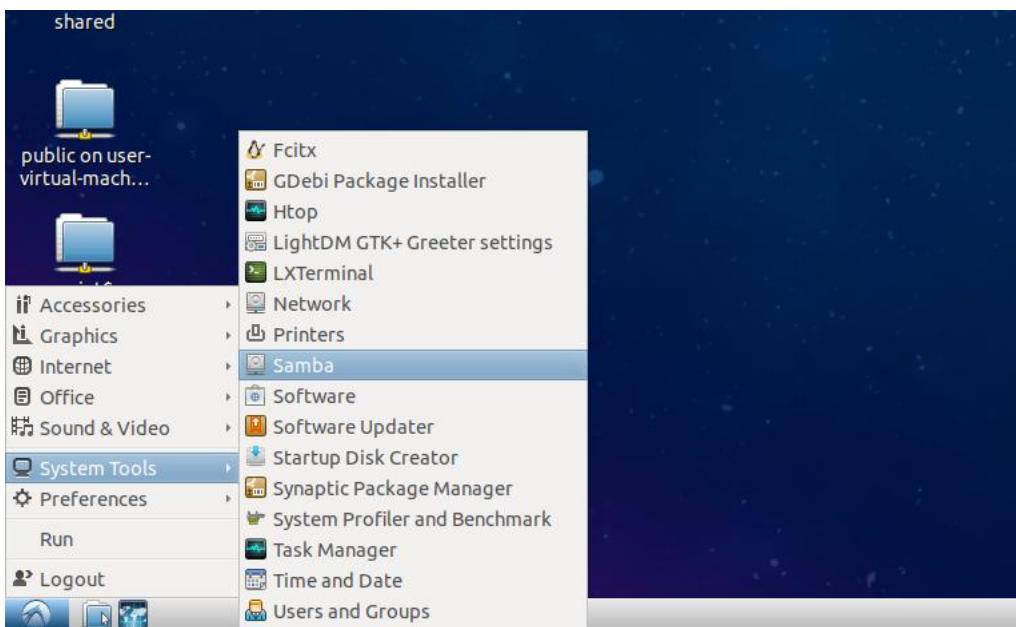

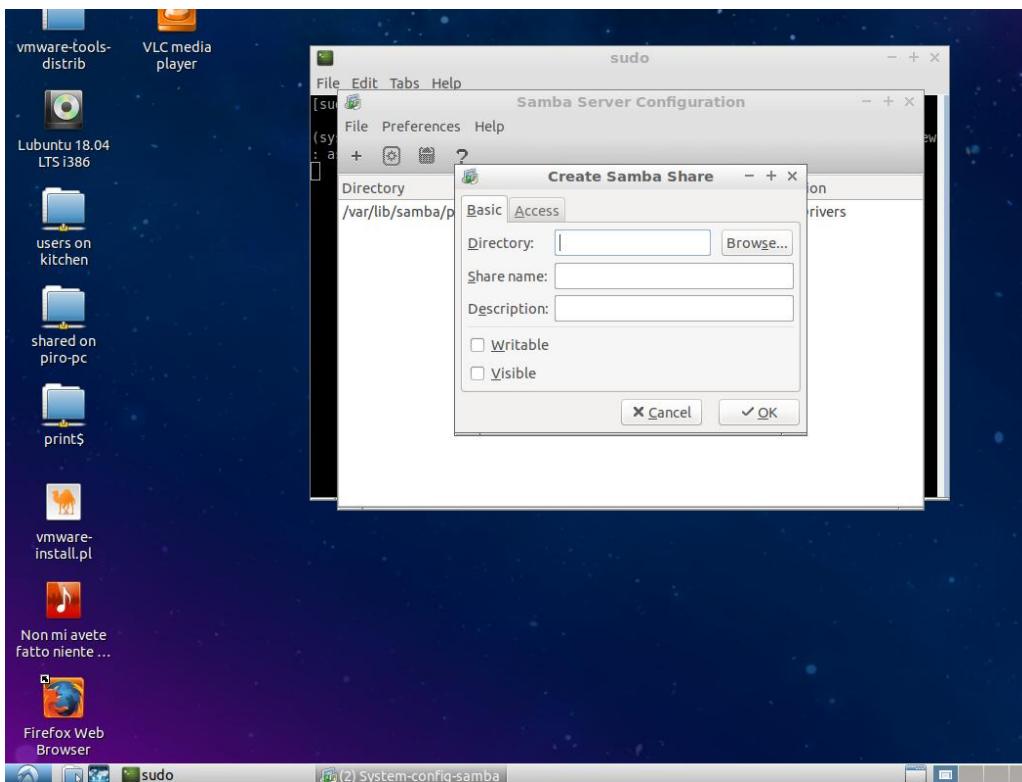

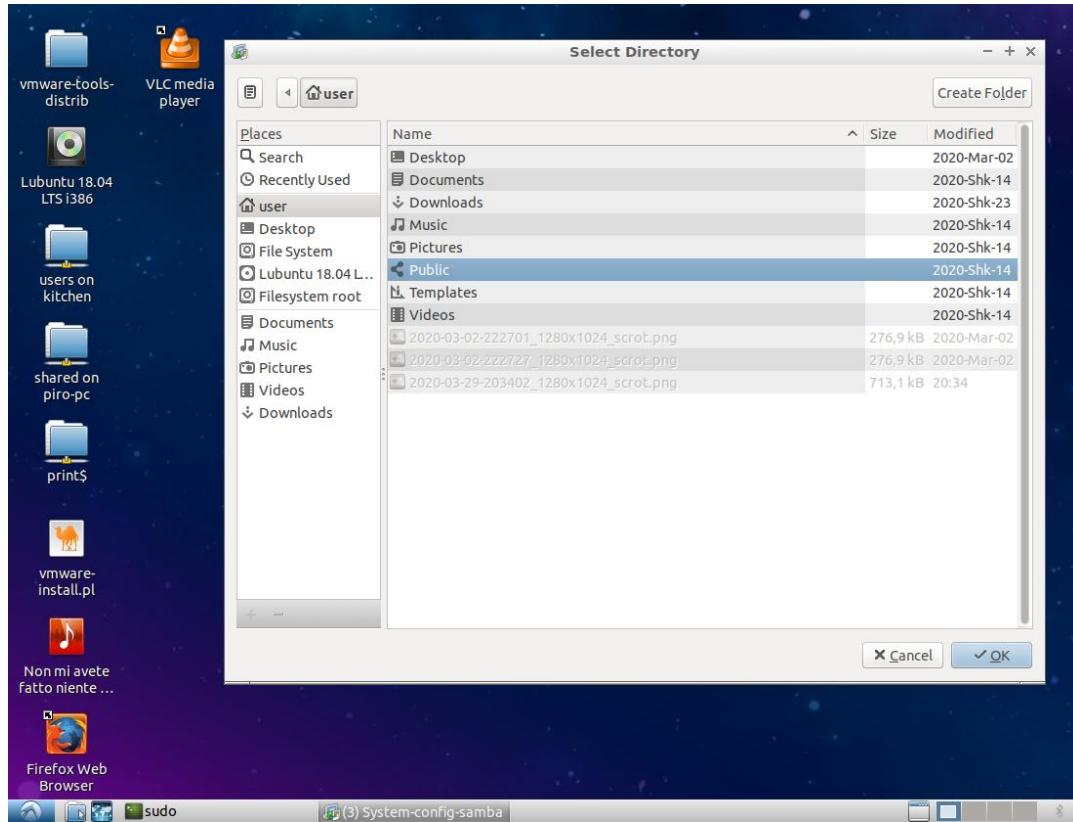

Krijimi i nje shared folder ne samba

1- Hapim serverin

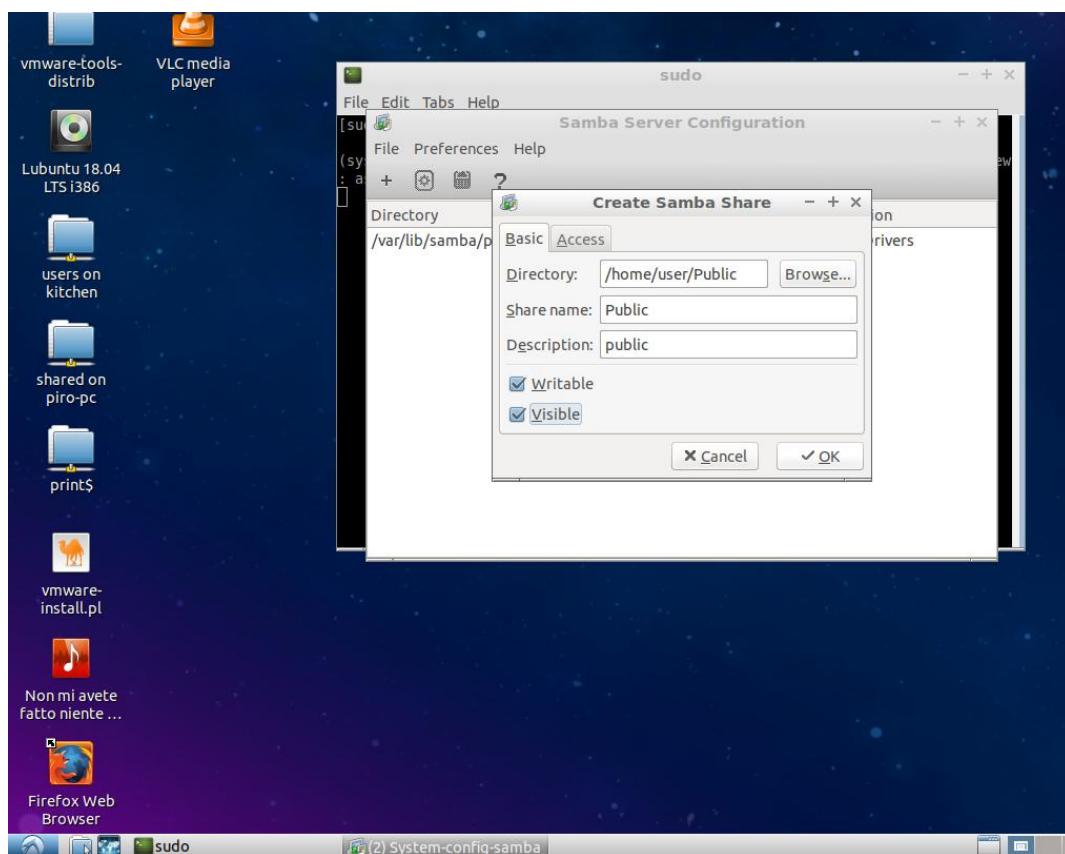

2- Zgjedhim direktorine

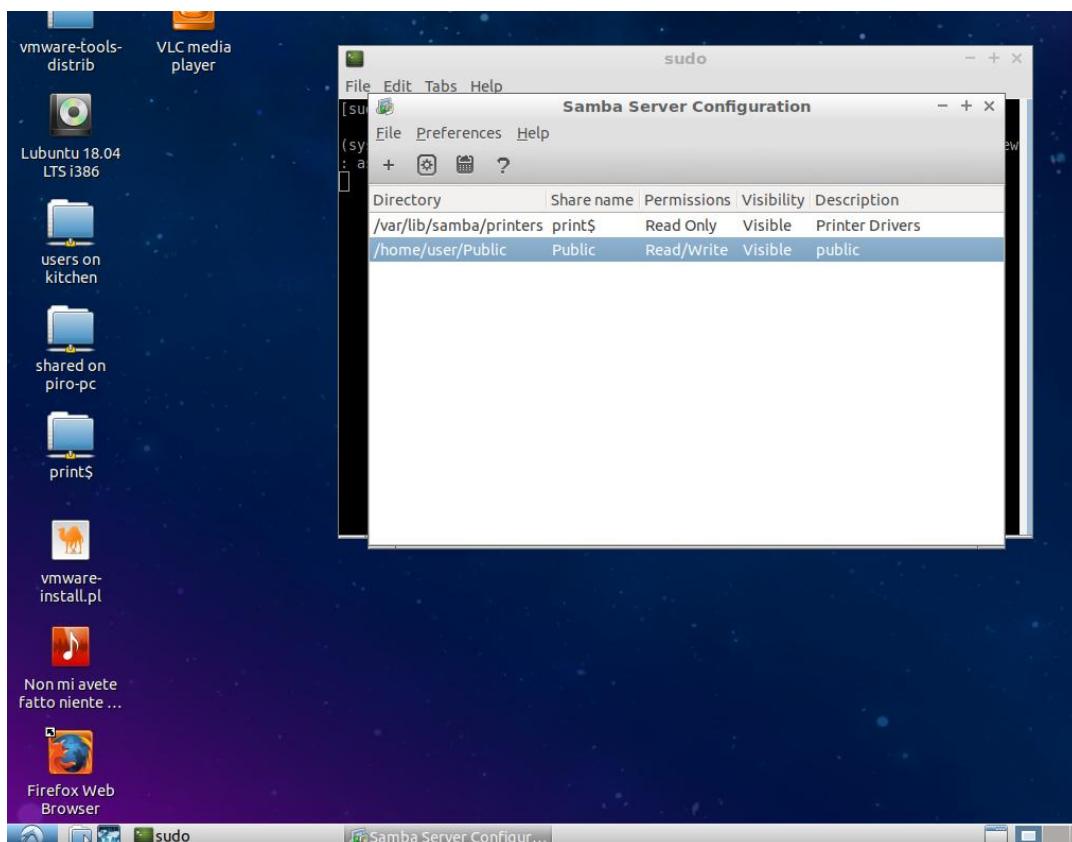

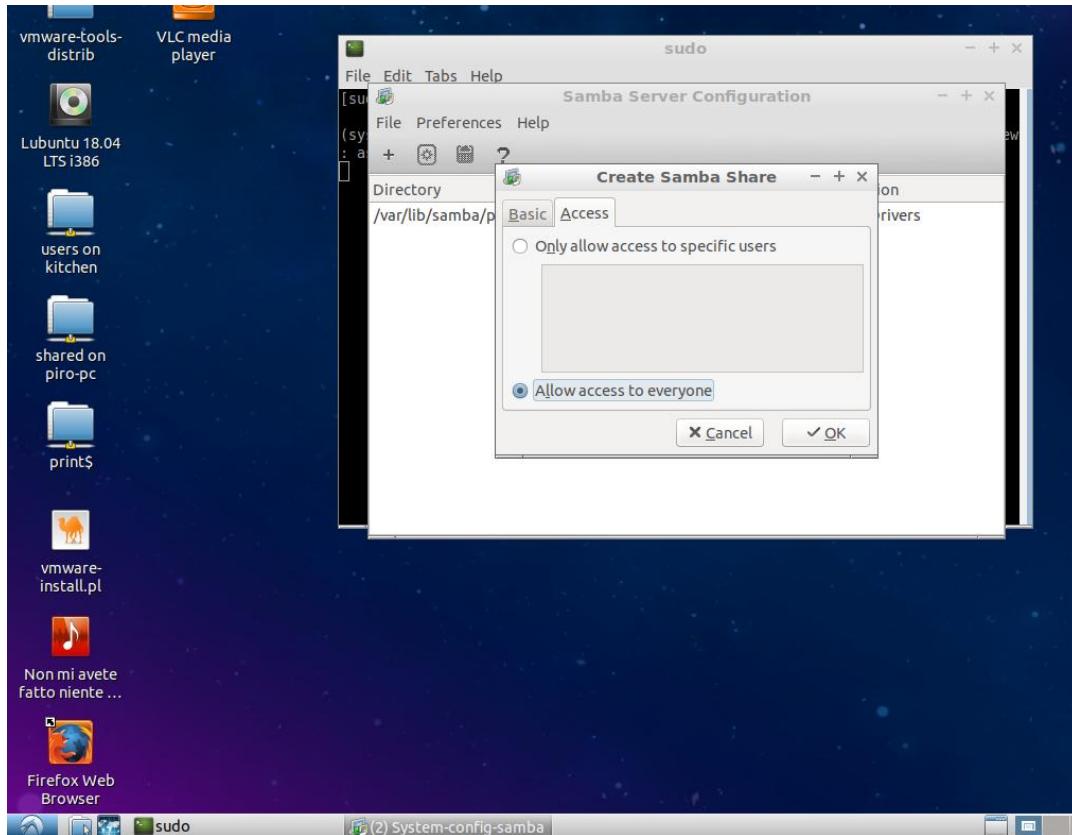

3- Vendosim pershkrimin (public) dhe check writable,visible,ok

4- Zgjedhim menyren e aksesimit te folderit(duke krijuar perdorues te caktuar ose duke lejuar perdorimin nga kushdo),ok

Kalojme ne Windows

Aksesimi i shared printers dhe linux files (public) ,nepermjet Windows network
